

INFO:

Login password required

Process of Solving:

found script in HTML code:

```
<!--  
var password= "hax0r";  
  
password=prompt("Please enter the Password!","");  
if (password=="skriptkid") {  
  
window.location.href="http://challenges.enigmagroup.org/basics/js/2/"+password+".php";  
}  
//-->
```

skriptkid is password

Writeup:

Congratulations on beating the mission again.

No credits were rewarded, but it's good to see you're testing your skills again.

[Return to Enigma Main](#)

Congratulations on completing this mission. Hopefully you noticed the decoy "hax0r" at the top and also learnt what the "prompt()" function does.

In Javascript, there are two ways of creating a variable. The first is the use of var. ie

```
var x = y
```

You can also set variables without using var ie

```
x = y
```

The other function you learnt was prompt. This enables you to set a value based on user input. For example

```
x = prompt ( "The message for the text box", "Default value for the box" )
```

This would set the variable x to the text which the user inputed into the box.

Although you might not expect a website to be secured using Javascript, you would be surprised at the number which do. You won't find the big names using them, but people just starting out in web design seem to make it a hobby of theirs.
