SAVE THE PLANET

[Task 1] STEGosaurus

Made by Brandon

Hi! This is a basic steganography challenge. Good luck, have fun!
Here's some stuff that might help you:
We can hide data (files, text, etc) inside images using steganography.

Using steghide, we can extract this data like so:
steghide extract -sf image.jpeg
This will pull out the file from the image. Note: we often need a passcode, but sometimes we don't.
If we need to bruteforce a password using steg, we can use "stegcracker" with a password list of our choosing. If you're new, I recommend rockyou.txt.
I hope you appreciate my little challenge, have fun!

#1

What's the file name of the second file? With file extension.

---

password ' ' (blank)
729785.jpg

#2

What's the second flag?

---
